

Trap Footloop & Ladder

Warning

Working at height and all forms of activity conducted at height are dangerous and can lead to serious injury or death.

Improper use of equipment can result in serious injury or death. It is the responsibility of the user to obtain proper training in rope techniques and safety prior to any activity at height and use of such equipment.

This manual is not a do-it-yourself manual, and the information presented can-not replace proper training and experience. It is a person's obligation to get adequate training in appropriate techniques and safety practises. We have done everything possible to ensure that the information provided in this manual is accurate at the time of publication. However, we do not guarantee that this information will remain up to date, as many products and techniques change over time.

If you have doubts or difficulty understanding anything in this manual, please contact us.

Webbing Footloops and ladders

Have been designed for stepping and climbing up. However it is not a (PPE) per-sonal protective equipment. Use only as instructed, with a secondary back-up sys-tem and with compati-ble items of equipment. Check that the safe function of any one component within a system will not interfere with safe function of these Foot-loops or Ladders. Miss use can cause problems, weakness, serious injury or death. Neatness is strength. The Footloop needs to be clipped onto a hand ascender with a rated carabineer or quick link. The Ladder needs to be secured with a rated carabineer onto a solid anchor point or when using the ladder on a rope secure it with a rope grab. Always keep an eye out for potential falls as these products are not designed to withstand high impact forces.

Do not fall in these products!

Safety

Do not alter the product in any way. Any product subjected to a minor fall should be examined and discarded if there is any sign of defect or any doubts about safety.

Inspection

Before each use visually inspect to ensure the product is in serviceable condition and operates correctly. An examination should be carried out at least every 12 month by a competent person. These inspections should be recorded paying particular attention to areas of potentially high wear and sewn joints. See our info page on PPE Inspection.

When carrying out an inspection pay attention to the next items (if applicable):

- Check the label / marking (visible, age)**
- Check rope (cuts, burns, wear, chemical marks, dents, hernias, other damage)**
- Check stitching (cut, worn, coloured or disordered threads)**
- Check attachment points (deformation, cracks, wear, corrosion, marks)**
- Check O-ring and connectors (deformation, cracks, wear, corrosion, marks)**
- Check compatibility of connector**
- Check condition of protective components**

It is essential for safety that equipment is withdrawn from use immediately should:

Any doubt arise about its condition for safe use or;
Any product subjected to a major fall .

Maintenance & Cleaning - Always keep the product clean and dry. Any excess moisture should be removed with a clean, dry cloth and then allowed to dry naturally in a warm room away from direct heat.

Rinse in clean cold water. If still soiled wash in clean warm water (max. 40°C) with a soft detergent (within pH range of 5.5 to 8.5). Rinse properly in clean cold water and if needed to disinfect use a solution of water with alcohol. Do not use bleach!

Lubrication - When lubrication is needed a silicon based spray can be used. Do not excessively spray the lubricant over the buckle or gate. Wipe off any excess and protect any webbing or rope from being sprayed.

Transportation - For transportation use a container or bag that allows the product to breath and the gear to be protected.

Storage - After cleaning, store unpacked in a cool, dry, and dark place away from direct sunlight, as UV will cause damage to the webbing over time, excessive heat sources, sharp edges, vibration or other possible causes of damage. Do not store when wet or in a damp area >70%. If a long shelf life is required it is advisable to store in a moisture proof package, like a polyethylene bag.

Use in extreme environment - Use of any PPE in extreme environments can be dangerous. It is important to do appropriate testing before the use of our products in environments such as extreme cold or high temperatures (working temperatures are -30 degrees up to 60 degree Celsius) chemicals, dust, sand and other foreign materials should be avoided where possible, if you have any questions contact us and we can help you determine the effects. Electrical conductivity is another serious subject that should not be taken lightly. Your harness has metal components and should not be used close to high power lines or switch gear. When using our Fossil lanyards in a wet condition be aware that it is known that all rope products that are wet have a less of an impact capacity than when dry. So please be even more careful using it while being wet.

Lifespan - This is difficult to estimate but we advise as follows: Do not use more than 15 years after the date of manufacture or 10 years after its first use, whichever comes first. Assuming you have used the correct storage, the working life can vary from a five year span to a single use in extreme circumstances (e.g. highly chemical environment, serious fall). UV light including sunlight will reduce the working life significantly.

Warranty - Equipment offered by EYOLF Inc. are warranted against factory defects in workmanship and materials for a period of 3 years from date of installation or use by the owner, provided that this period shall not exceed 3 years from the date of shipment.

Upon notice in writing, EYOLF Inc. will promptly repair or replace all defective items. EYOLF Inc reserves the right to elect to have any defective item returned to its plant for inspection before making a repair or replacement. This warranty does not cover equipment damages resulting from abuse, damage in transit, or other damage beyond the control of EYOLF Inc. This warranty applies only to the original purchaser and is only one of applicable to our products, and is lieu of all other warranties, expressed or implied.
